

# VINCE OCAMPO

## Software Developer

Auckland, New Zealand

Email: vinceocampo711@icloud.com | Phone: +64 21 026 00051

LinkedIn: linkedin.com/in/vince-ocampo-1050a41a5

## SUMMARY

---

Software developer working on government registry platforms, with experience across the full delivery lifecycle, from developing new services and running major platform upgrades to release coordination and production support. Skilled in Java and Groovy development, resolving live data issues using MongoDB aggregation scripting and maintaining automated test suites with Cucumber/Gherkin, alongside building full-stack web applications with React, TypeScript and Node-based tooling. Comfortable owning release cycles end-to-end in Agile teams, from UAT through production go-live, with a collaborative, detail-driven approach to problem-solving.

## CORE TECHNICAL SKILLS

---

- **Back-End:** Java, Groovy, Spring Boot, Python, Node.js, Maven
- **Front-End:** React, TypeScript, JavaScript, HTML, CSS, Tailwind
- **Databases:** MongoDB, SQL, GraphQL, NoSQL, Firestore
- **Testing & CI/CD:** Cucumber/Gherkin, Unit/Integration Testing (Groovy, Python, Node.js), Jenkins, GitHub Actions
- **Tools & Version Control:** Git, GitHub, Docker, Jira, Bitbucket, GitLab, Claude Code (AI-assisted development)
- **Ways of Working:** Agile, Kanban, sprint planning, code review via pull requests, release and change management

## PROFESSIONAL EXPERIENCE

---

### Foster Moore

Auckland

#### Software Configuration Developer

Sep 2025 - Present

- Troubleshoot production issues and coordinate triage of bugs and support tickets for live business registers as part of Global Support Services
- Build monthly release packages for UAT and production. Ensure automated tests pass in Jenkins before deployment and provide standby support during production go-live
- Manage environment configuration for services such as Redis, Elasticsearch, MongoDB and RabbitMQ
- Write JavaScript data-fix scripts using MongoDB aggregation pipelines to resolve production data issues, with dry runs, backups and rollback steps. Help standardise the team's data-fix process by creating reusable script templates
- Carry out major platform upgrades, merging core platform changes into project code and fixing the tests that break
- Review teammates' pull requests for correctness, test coverage and consistency with project standards
- Pick up new codebases quickly, delivering features and urgent production fixes across multiple live systems

#### Junior Software Developer

Nov 2023 - Aug 2025

- Took on greater ownership of the national registry rebuild through to go-live, then moved with it into production support
- Built registry services including registration, corrections, renewals, beneficial ownership and restoration, with the rules, forms, data models, certificates and notifications behind them
- Expanded automated test coverage with Cucumber/Gherkin scenarios and seed data generators, reworked the test structure and fixed intermittently failing tests
- Began performing MongoDB data fixes in UAT using JavaScript, laying the groundwork for the standardised data-fix process introduced in the current role
- Documented spec requirements based on client feedback, translating them into actionable work for the development team

#### Graduate Software Developer

Mar 2023 - Oct 2023

- Joined the Consulting team, helping build new business registers for clients using Verne, the company's registry programming language based on Java and Groovy
- Began contributing to modernising a national registry from a legacy system onto the company's platform
- Delivered early registry features such as registration form changes and access permission rules
- Wrote automated tests using the company's Cucumber/Gherkin-based testing framework, alongside some manual testing

**Doorknock**  
***Intern Software Developer***

Auckland  
*Jul 2022 - Sep 2022*

- Assisted in building an MVP to validate the company's product concept, working with other devs and UX designers to convert designs into working website features
- Built front-end features in React, Gatsby and Tailwind with GraphQL and Firestore
- Practiced Agile delivery via daily stand-ups, Kanban boards, Jira and Bitbucket

## **EDUCATION & TRAINING**

---

**University of Auckland**

2018 - 2021

- Bachelor of Science - Computer Science and Statistics

**Mission Ready**

Apr 2022 - Jun 2022

- Certificate in Digital Technology Product Solutions (Level 5)
- Certificate in Applied Technology Development Essentials (Level 6)
